Errata

Erratum: SRTM and VMAP0 data in OGR and GRASS

The first 'find' command in Figure 3 does not work on certain systems

The first 'find' command in Figure 3 'Shell code to fix the original VMAP0 file/directory names for OGDI/OGR usage' does not work on MaxOSX.

Solution: Add a dot after the find:

- old:
  ```
  find -name '*.'  > /tmp/vm_list1
  ```

- correct:
  ```
  find .  -name '*.'  > /tmp/vm_list1
  ```

Erratum: Interfacing GRASS 6 and R

select CRAN mirror without X11 running

- development files for gdal are necessary (e.g. for a Debian box, apt-get install libgdal-dev)

- in case you get the error: — *Please select a CRAN mirror for use in this session* — (when a graphic monitor is not available for whatever reason, e.g. in case of remote installations)

  – add the address of a CRAN mirror to your install command, e. g. install.packages(c("sp","rgdal"), dependencies=TRUE, repos="http://microarrays.unife.it/CRAN/")

  – alternatively, one could set the search of cran mirror to non-graphic, by typing: chooseCRANmirror(graphics=FALSE) before the install command.
