## ***Get involved in 2008***

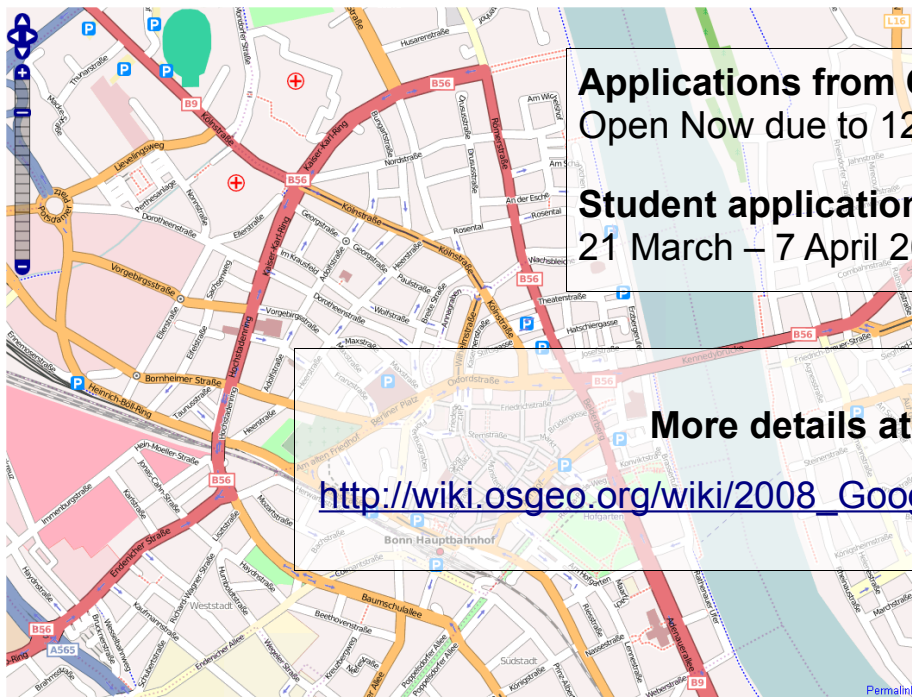

### ***Google Summer of Code***

The *Google Summer of Code* program is designed to encourage student participation in open source development. The Open Source Geospatial Foundation is looking for students to join us in making 2008 the best Summer of Code yet! We'll be offering successful student contributors a 4500 USD stipend, enabling them to focus on their coding projects for three months.

The project ideas are ranging from the depths of computer science graph theory to the heights of visualization.

Proposed projects: GDAL, GeoServer, GeoTools, GRASS, Mapbender, MapGuide Open Source, MapServer, OpenLayers, QGIS, PostGIS, ...

Your own ideas are more than welcomed - they are encouraged.

**Applications from Open Source projects:**  
Open Now due to 12 March 2008

**Student applications:**  
21 March – 7 April 2008
